Education

Sant Gadge Baba University — Amravati, MH
Bachelor of Engineering in Electronics and Telecommunication | CGPA: 8.47/10 — *May 2020 – July 2024*

S.M.D. Bharti High School — Arni, MH
SSC | 89% — *June 2017 – Mar. 2018*

Experience

Freelance Full-Stack Developer | *React, Express.js, PostgreSQL, JWT* — Oct. 2025 – Jan. 2026
Disha Library | Live | Code — *Arni, MH*

- Built a seat booking platform with OTP-verified requests using React, Express.js, PostgreSQL
- Implemented secure admin login (JWT, bcryptjs, Zod) optimized as rate limited OTP resends IP-based blocking and seat assign/replace/remove management
- Built gender-matched waiting list auto assignment and ex-students archieved on seat turnover
- Integrated Brevo email API for booking, inquiry, notifications with a live dashboard for occupancy data

Projects

FluxIntelAI | *LangChain, Pinecone, FastAPI, PostgreSQL, React, Node.js* — Live | Code

- Built a RAG pipeline using Langchain, Pinecone vector database, VoyageAI embeddings, adaptive chunking, MMR retrieval, re-ranker and timestamp-grounded answers
- Streamed LLM responses via Langchain's ChatOpenAI interface, backed by PROCESSING/READY/FAILED state machine, 2 retry-caps and a worker auto-repairs failed jobs every 30 min
- Build token aware chat-memory(postgreSQL) with auto-summarization at 2000 tokens and 3000 token session cap
- Integrated sidebar for per-user chat history, rename, delete, share chat using links via UUID
- Architectured 3 layer service system (React, Express, FastAPI) secured with google OAuth, JWT Cookie-based authentication and an Internal API key between services

BlogNest | *TypeScript, Hono, prisma, PostgreSQL, Cloudflare workers* — API | Code

- Built a type-safe REST API using Typescript, Hono and PostgreSQL(Prisma ORM), deployed a serverless edge runtime on Cloudflare workers
- Solved workers stateless connection limits using Prisma Accelerate for connection pooling, reducing query latency by 20-50%
- Implemented authentication and authorization using JWT(hono/jwt) middleware, bcrypt password hashing, Zod input schema validation
- Enforced authorization via row-level ownership checks(authorId) on update queries backed by a foreign-key relational schema and paginated bulk reads

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C/C++, SQL (Postgres)
Frontend: React, Vite, Recoil, HTML, CSS, Tailwind CSS
Backend: Node.js, Express.js, FastAPI, Hono
Databases & ORM: PostgreSQL, MongoDB, Mongoose, Prisma, SQLAlchemy
AI: LangChain, LangGraph, Pinecone, FAISS, ChromaDB, VoyageAI, OpenAI SDK, Groq SDK
Auth & Validation: JWT, Google OAuth, bcrypt, Zod
Developer Tools & Platforms: Git, GitHub, Docker, AWS, Cloudflare Workers, Vercel, Render, Railway, Brevo API, Figma, Cloudinary, VS Code, Intellij IDEA, Jupyter Notebook

Achievements

Solved 120+ DSA problems on LeetCode and 50+ on GeeksforGeeks (Easy–Hard) across arrays, strings, recursion, two pointers, sliding window, stacks, linked lists, queues, hashmaps, hashsets, binary search, sorting, and OOP
